## WAREHOUSE SAFETY GATE FOR ANIMAL FEED MANUFACTURER

### APPLICATION

• A manufacturer of animal feed stores their product on the second floor of a warehouse. The only fork truck access is thru an opening in the floor. The initial safety measure was a garage door that had to be opened to use then closed to keep the opening secure. The issue was the operator had to close the door. In many cases this did not happen causing an unsafe employee environment.

### SOLUTION PROVIDED

• Wells Brothers, Inc. designed, built, and installed a mechanical/electrical automated safety gate. The safety gate swings open and closed with a manual push button opener. The operator still opens and closes the gate as required, however, if the gate is open in the access position for the 1st floor or the access position for the 2nd floor, the floor opening is secure for personnel.
